

Educational intervention for students with High Intellectual Ability:

Development of cognitive, academic, and socioemotional skills

Diego Lería Ugarte

Predoctoral researcher

Department of Educational Sciences, Faculty of Arts and Education, University of La Rioja

Directors: Sylvia Sastre i Riba, Christoph Perleth, & Antoni Castelló Tarrida

Three **Meta-Analyses** to Determine the Effects of Enrichment on High Intellectual Ability (HIA) Learners

1

1.1. High Intellectual Ability Education (Lería-Ugarte & Sastre-Riba, in Press)

Challenge	The expression of high intellectual potential	Neurobiological predictor – endogenous and exogenous modulators
	(Sastre-Riba, 2020)	

- ❑ Among exogenous factors, **education** plays an important role
- ❑ **Adjusting educational attention** to people with HIA (Riedl-Cross & Cross, 2022):
 - Individual need
 - Investment in a sustainable future for society

- ❑ These **educational needs** might be expressed at the following levels:
 - **Cognitive** (Elballah et al., 2024)
 - **Academic** (Kaul et al., 2016)
 - **Socioemotional** (Gubbels et al., 2014)
 - **Ethical** (Sastre-Riba, 2026)

1.3. Curricular and extracurricular enrichment (Lería-Ugarte & Sastre-Riba, in Press)

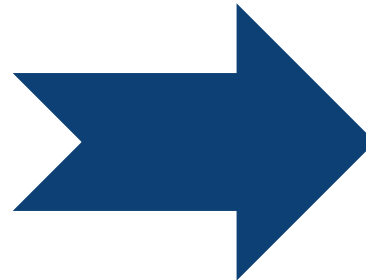

ENRICHMENT

Strengthen the application of interdisciplinary methodologies
Encourage the expression of high potential and promote well-being

Create novel products

(Brigandi, 2019)

OBJECTIVE

To analyse the current state of enrichment programmes and partial enrichment globally, and their **effects** on the **cognitive, academic, and socioemotional development of learners with HIA**

1.4. Method

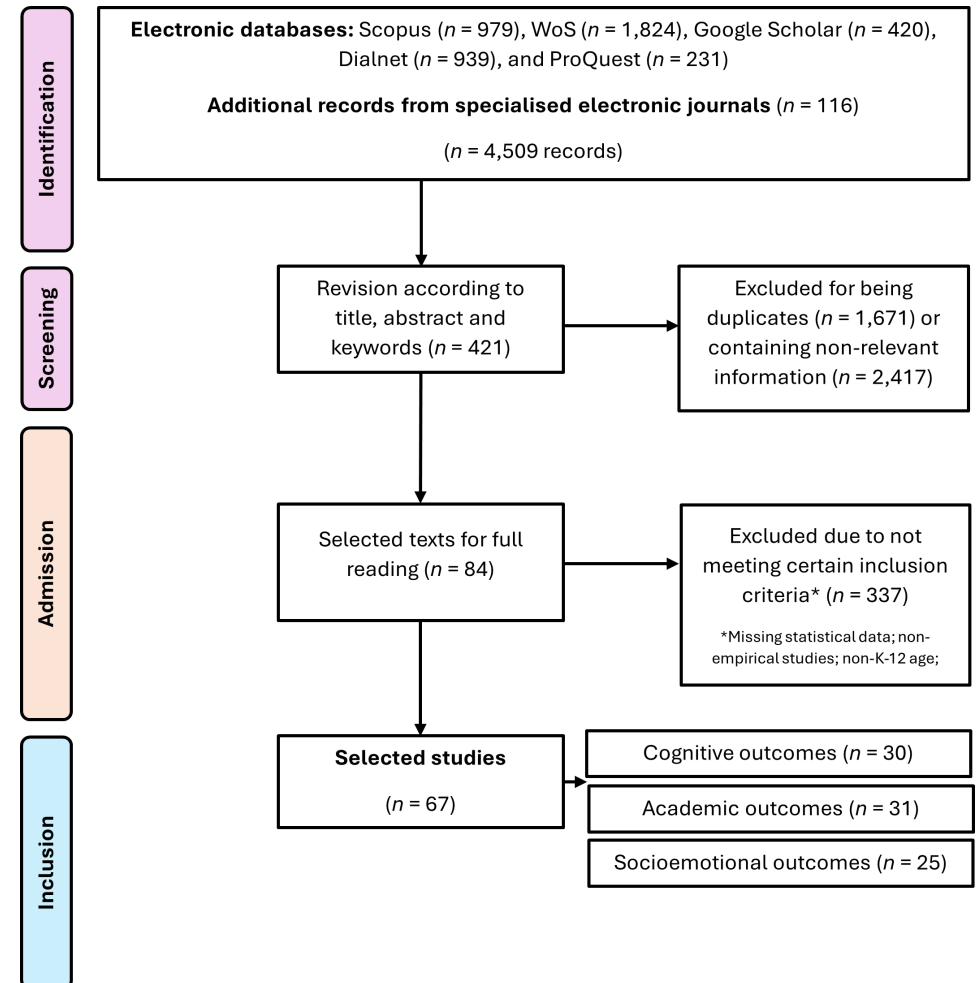

(Lería-Ugarte & Sastre-Riba, in Press)

❑ Systematic review: 11/24 - 12/24

- Repetition of data extraction: 09/25 - 12/25
- **kc** = 0.851 (high level of intra-observer agreement)

❑ Inclusion and exclusion criteria:

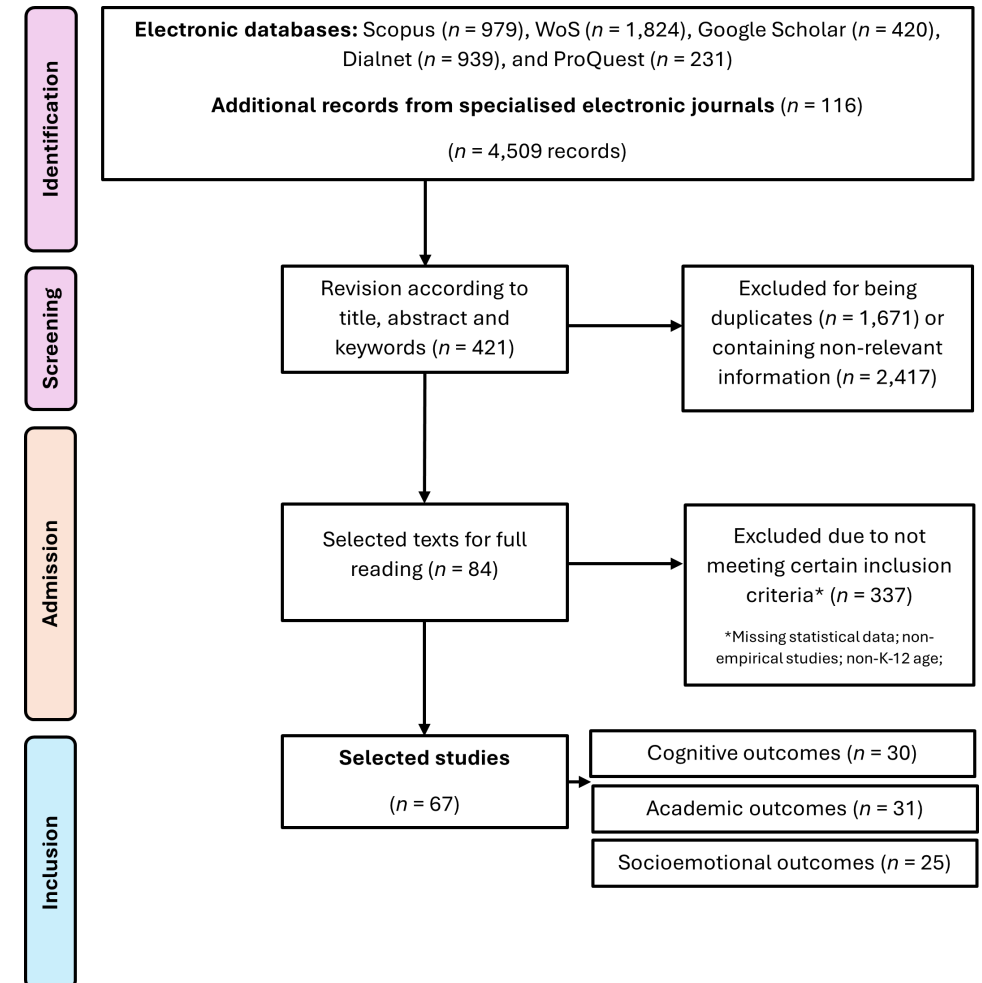

1. Be empirical in nature.
2. Involve two groups of learners (experimental and control) or one group with pre-post measures.
3. Cover the age range corresponding to K-12.
4. Regarding the enrichment program: (a) include curricular or extracurricular enrichment strategies, and (b) exclude educational intervention programs based entirely on acceleration.
5. Monitor any of the following indicators: cognitive development, academic achievement, and socioemotional development.
6. Provide the appropriate statistical data to calculate the effect size.
7. Be published in an English or Spanish-language journal indexed in JCR or SJR metrics.
8. Be published between 2010 and 2025.

1.4. Method

(Lería-Ugarte & Sastre-Riba, in Press)

- ❑ Conducting a **meta-analysis** → unique scientific contributions in the field of HIA education (Elballah et al., 2024)
 - It features **comparative studies that measure differences** in cognitive and social development, as well as academic performance, among **learners in enrichment programmes compared with those in regular classes**.
- ❑ **Meta-analyses:**
 1. Calculation of the effect size for each empirical study
 2. Calculation of the pooled effect size and confidence interval
 3. Assessment of empirical heterogeneity
 4. Assessment of publication bias
 5. Sensitivity analysis
 6. Analysis of moderating variables

1.5. Results: the impact of enrichment programmes (Lería-Ugarte & Sastre-Riba, in Press)

- 1 Each scientific record employs **different terminological criteria**
- 2 Distribution of effect sizes → **a tendency toward a positive effect of enrichment programs (total or partial)** on the development of HIA learners
- 3 The three meta-analyses demonstrated a **positive and significant effect ($p < 0.001$)** of the programmes
The **nature** of the studies **was not homogeneous**
- 4 **Sensitivity analysis:**
 - + It helped to reduce empirical heterogeneity
 - It produced a systematic reduction in the effect size of these programs
From a medium-high effect to a medium-low effect
- 5 The high empirical heterogeneity could be explained by the influence of **moderating variables**. These include:
 - Cognitive studies:
grade level
 - Academic studies:
type of study / sample size / region
 - Socioemotional studies:
none of the assessed moderator variables

1.7. Conclusions: the impact of enrichment on HIA learners (Lería-Ugarte & Sastre-Riba, in Press)

Enrichment

It is a desirable educational strategy IF it is properly justified, implemented, and measured in terms of effectiveness

❑ Achievement of the main objective

It demonstrated (as Gül & Ayık, 2026; Kim, 2016) the OVERALL TREND towards **POSITIVE, SIGNIFICANT, AND MODERATE EFFECTS** of enrichment programmes (or partial enrichment) on the development and education of learners with HIA (Brigandi et al., 2018; Elballah et al., 2024; Gubbels et al., 2014)

It faced: **conceptual disparity and lack of clarity** regarding the nature of HIA and its cognitive, academic, and socioemotional approaches to **educational personalisation**

A high level of impurity that cannot be explained by publication bias

❑ Common underlying pattern: **a high degree of heterogeneity** → moderating variables

A wide range of backgrounds that result in different strengths, weaknesses, and needs regarding educational participation (Sternberg & Ambrose, 2021)

Influence of
atypical studies

NEED for **research and educational intervention in HIA** to be based on scientific evidence that has been applied and evaluated for its effectiveness

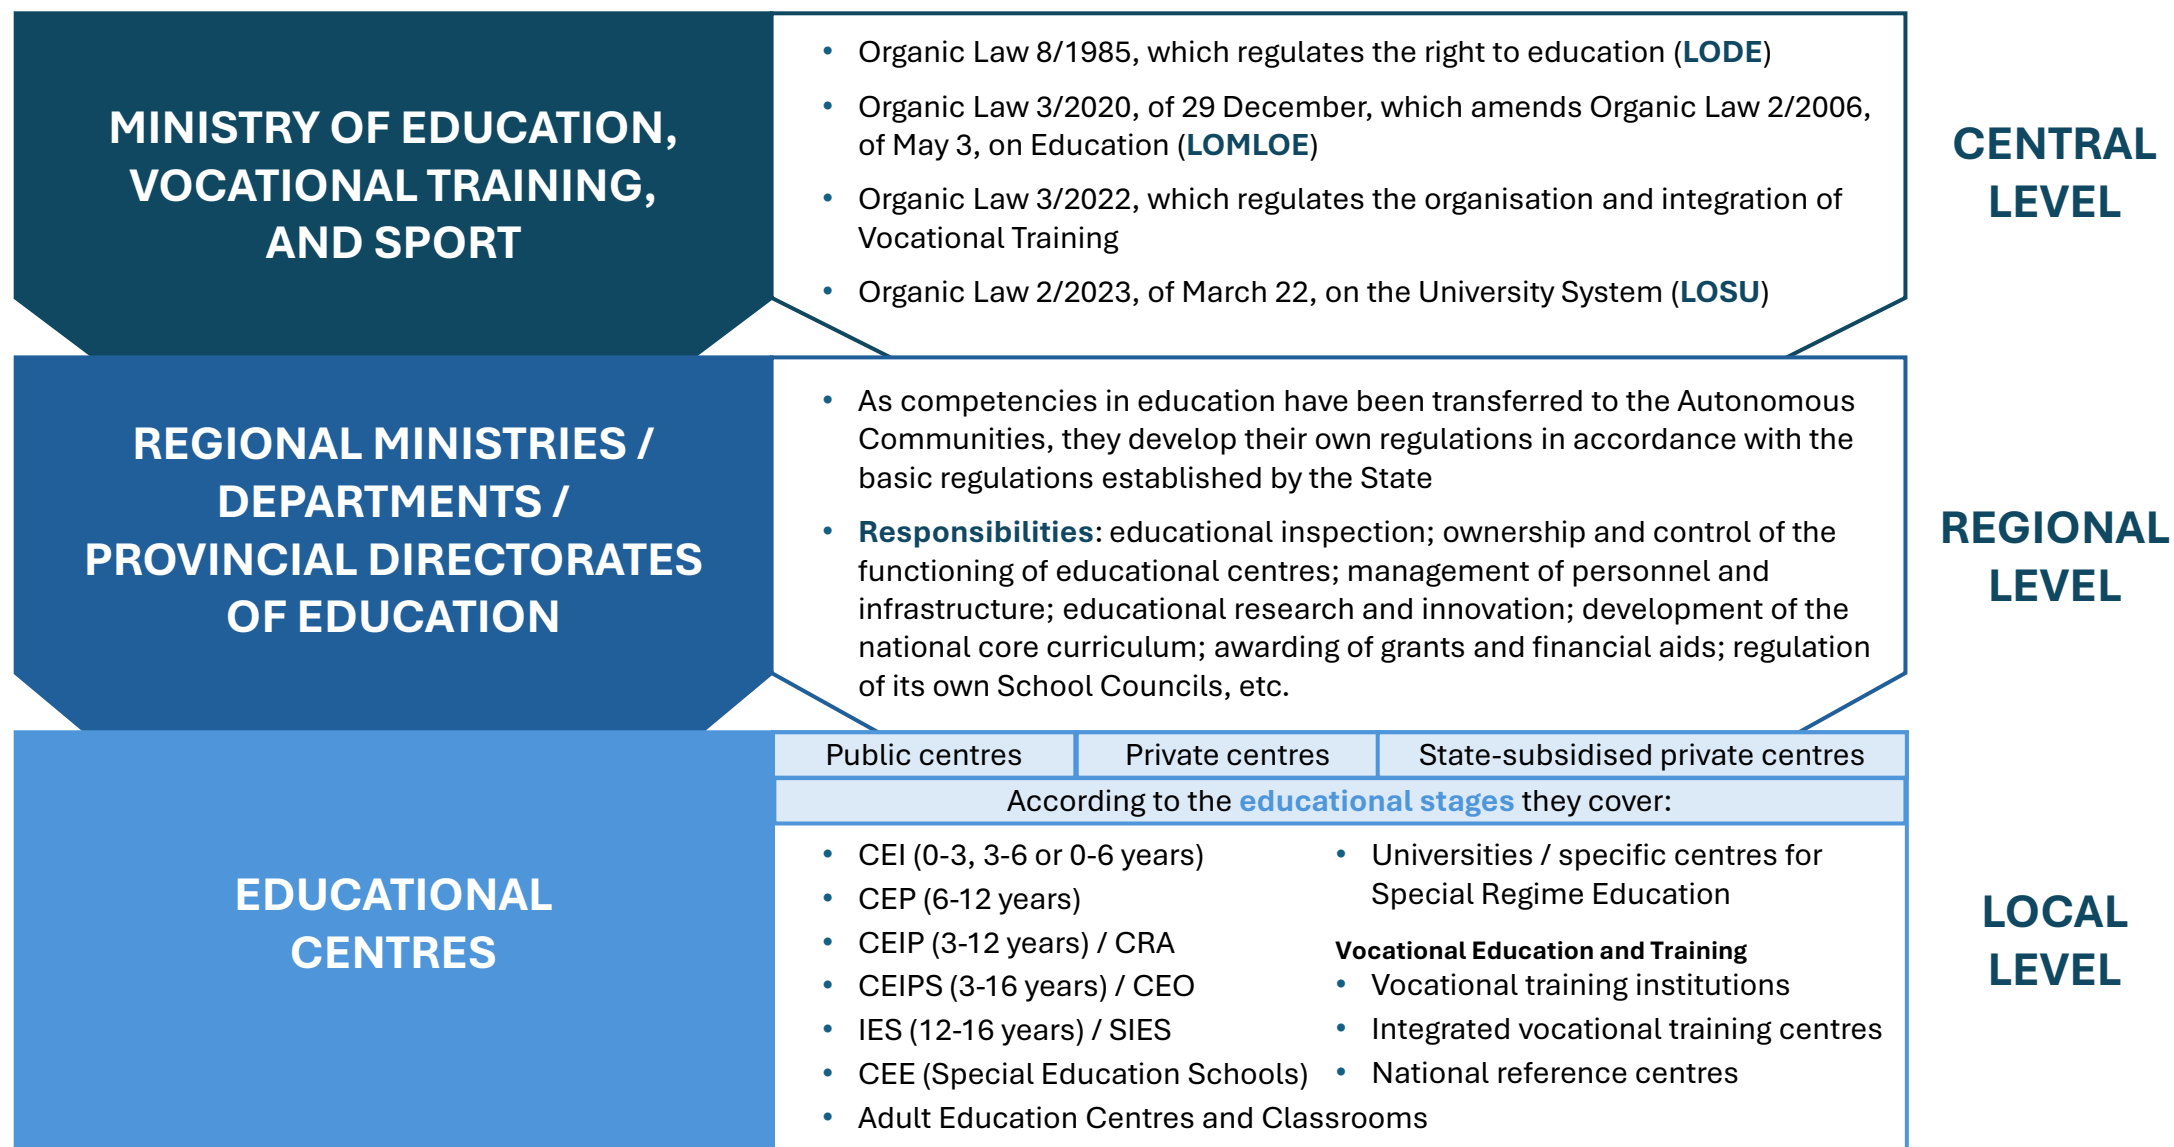

NEED for more research with greater conceptual clarity on the nature and development of HIA and its effectiveness

The **educational system** in Spain and its approach to giftedness and talent

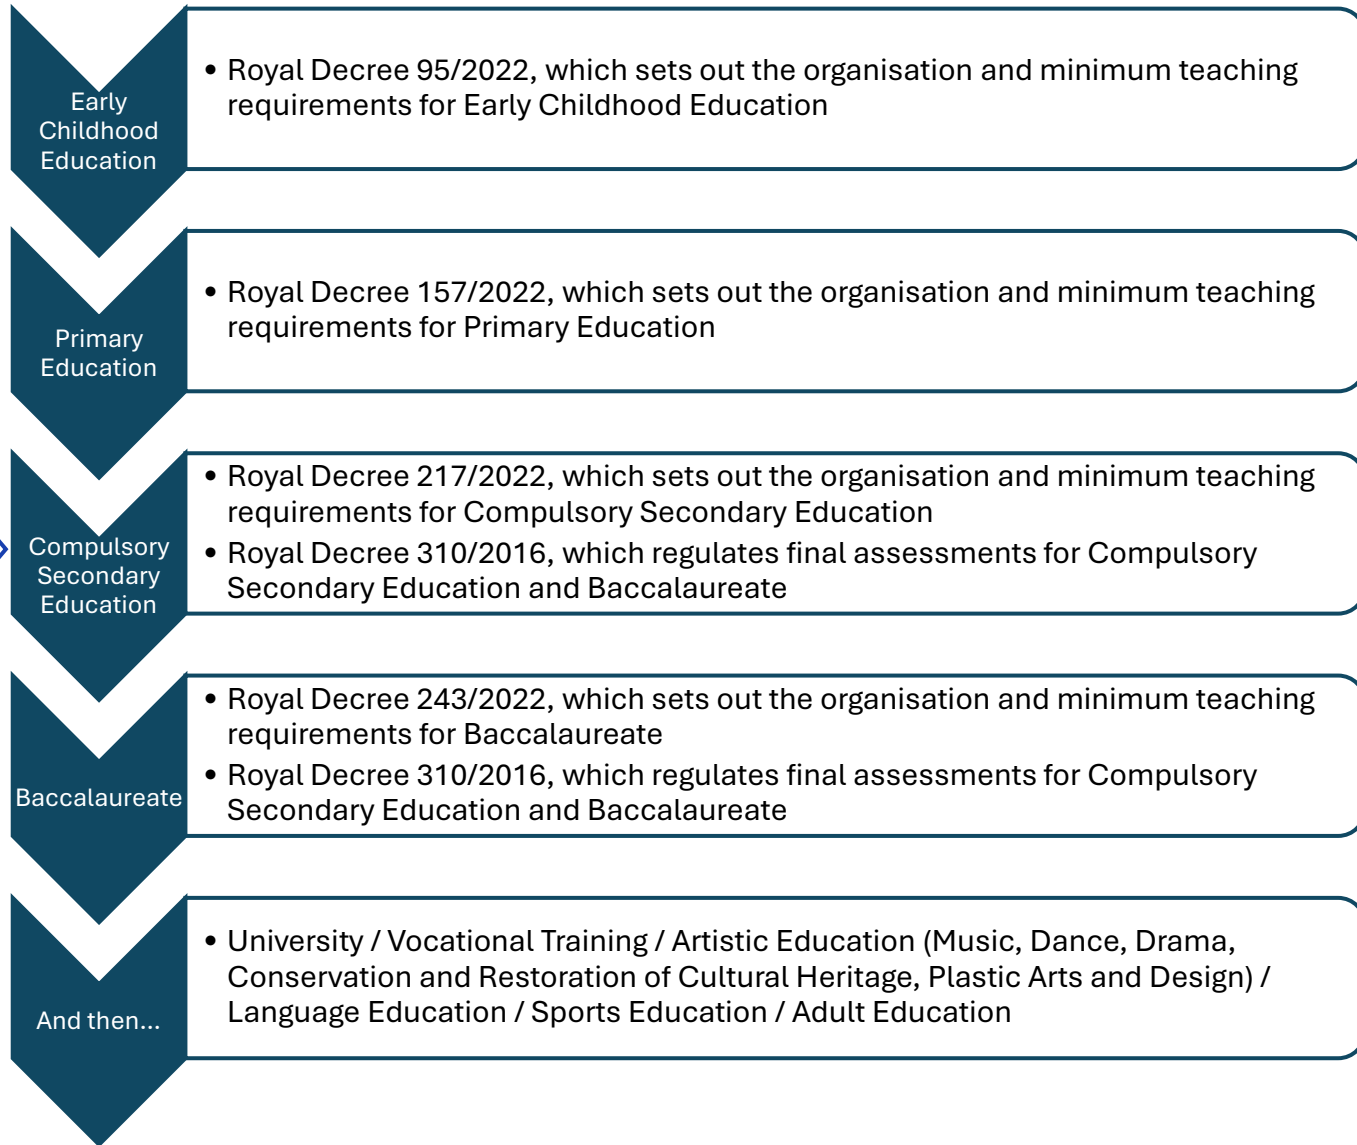

2

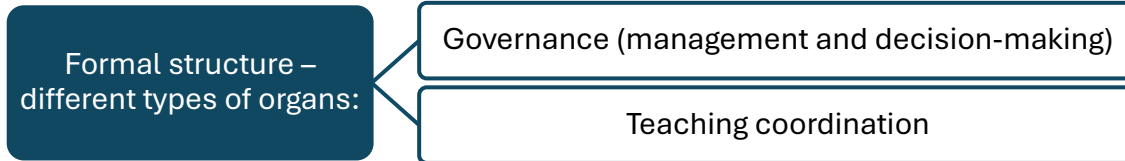

2.1. Governance of the Spanish educational system

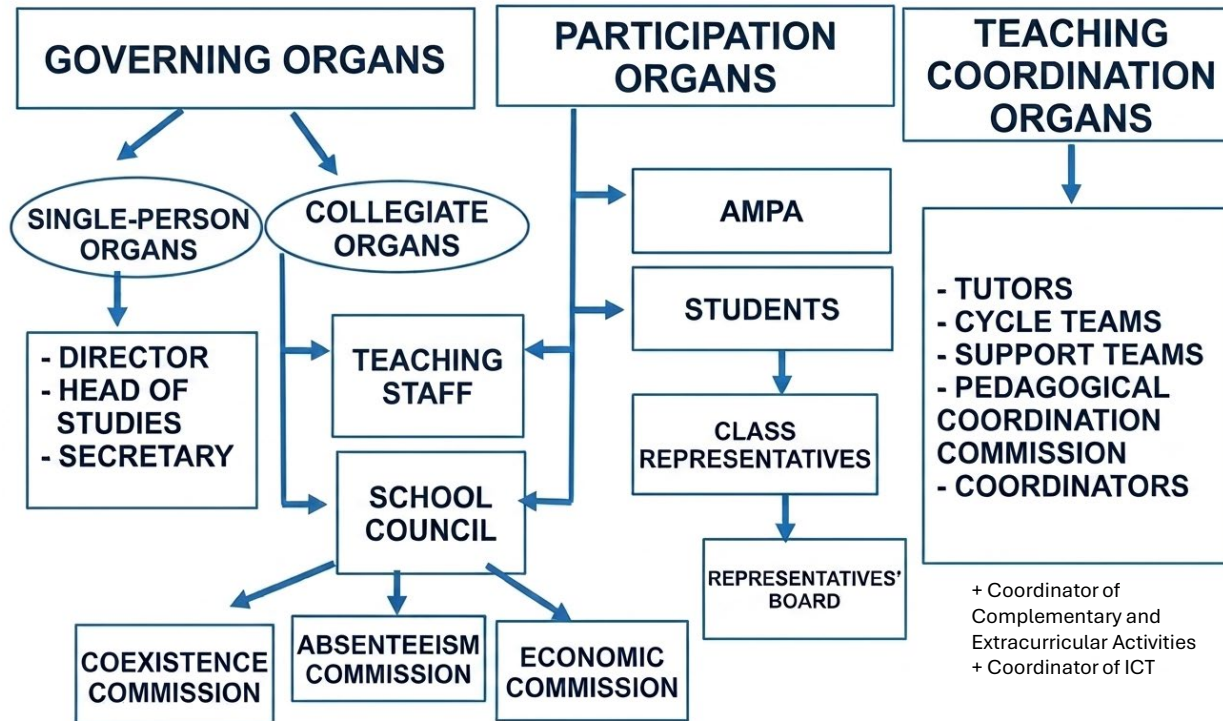

2.2. Educational stages

2.3. Internal organisational structure of an educational institution

Educational planning through institutional documents

- **Principles:** autonomy, context, and participation
- **Pedagogical autonomy:**
 - PEC: School Educational Project
 - PAD: Diversity Attention Plan
 - PAT: Tutorial Action Plan
 - PC: Coexistence Plan
 - PL: Reading Plan
 - PM: Improvement Plan
 - EDC: Institutional Digital Strategy
- **Organizational autonomy:**
 - ROF: Rules of Organization and Operation
 - PGA: Annual General Program
 - MA: Annual Report
- **Management autonomy:**
 - PGES: Management Project

2.4. Attention to diversity and educational inclusion in Spain

*The schooling of students with **specific educational support needs** must be guided by the principles of inclusion and participation, quality, equity, non-discrimination, and effective equality in access to and retention within the education system, as well as universal accessibility for all students*

LOMLOE (2020, p. 122877)

Educational inclusion measures

General measures

Personalised attention measures (MAP)

MAP

- Curriculum Accessibility Adjustment (AAC)
- Competency Adjustment (AC)
- Individualised Work Plan (PTI)
- Total or partial exemption from subjects (ExP)
- Flexibilization
- Placement in a lower grade level
- Extraordinary retention within an educational stage
- Educational Support Programs addressing students' individual differences
- Placement in special education centres or special education classrooms located within mainstream schools

Special Educational Needs (severe disabilities or disorders)

Developmental delay

Language and Communication Development Disorder

ADHD and Learning Difficulties

Severe lack of knowledge of the language of instruction

Situation of socio-educational vulnerability

High Intellectual Ability

Late entry into the educational system, personal circumstances, or academic history

2.5. Specific attention for HIA learners

The education administrations shall provide the necessary resources to ensure that all pupils achieve their full personal, intellectual, social, and emotional potential, as well as the objectives set out in general terms in this law.

*It is the responsibility of the education administrations to **ensure that the necessary resources are provided** so that students who require educational attention different from the standard provision, [...] due to their high intellectual abilities [...], can **achieve the fullest possible development of their personal abilities** and, in any case, the objectives set out generally for all students.*

LOMLOE (2020, p. 122909)

Acceleration

The duration of the stage can be reduced by one year
Assess previously personal well-being and socialisation

Develop **curricular enrichment plans** designed to improve the skills of those pupils who need it

From Primary School onwards

NO common protocol across the 17 autonomous communities + low detection rates (under-diagnosis) + a lack of training for teaching staff

Spanish **programmes for educational attention** to HIA learners

3

3.1. Diversity in program offer by autonomous community

- ❑ The principles of **inclusion and equity are not always guaranteed** for the group with HIA

INEQUALITY IN SPAIN: disparities in educational provision between regions and the need for training for school leaders, counsellors, and teachers.

(Elena Monleón et al., 2025)

The **National Confederation of Associations for High Abilities (CONFINES)** highlights the need for changes to education to ensure adequate attention in both the educational and social spheres.

The following **examples** are offered to illustrate this phenomenon

3.2. La Rioja

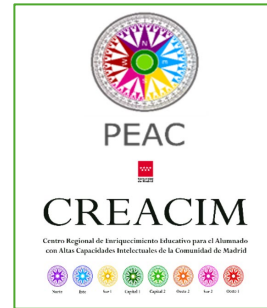

UR Talent

Inicio / UR Talent

El Programa de Enriquecimiento Extracurricular para niños y niñas con Altas Capacidades UR Talent se inserta dentro del convenio de colaboración entre el Gobierno de La Rioja, mediante la Consejería de Educación, Cultura, Deporte y Juventud, y la Universidad de La Rioja, mediante su Fundación General.

3.3. Madrid

Colegio con Programas de Altas Capacidades

Among others...

3.4. Murcia

RED DE CENTROS DE PROMOCIÓN DEL TALENTO

programa TALENTO

Consejería de Educación, Formación Profesional y Empleo
Región de Murcia

Programa de talleres de enriquecimiento extracurricular

02/06/2025 09:26

Programa "Mentorías en la universidad para estudiantes de secundaria con altas capacidades intelectuales"

ADYV

ATENCIÓN A LA DIVERSIDAD Y VOLUNTARIADO

Acompañamiento para la promoción del talento

El alumnado con Altas Capacidades Intelectuales (AACC) o Alto Rendimiento Académico de la UMU, podrá acceder al Servicio de Atención a la Diversidad y Voluntariado para solicitar acompañamiento y/o medidas de apoyo, en la misma forma y procedimiento que el resto de las solicitudes de atención a la diversidad.

Tras la valoración del personal del servicio, se ofrecen las medidas y actuaciones que este alumnado requiere como orientación psicopedagógica, tutorías de seguimiento docente, acceso a programas de mentoría o proyectos de investigación en fases tempranas, promoción del enriquecimiento curricular, coordinación con el profesorado y/o fomento de la participación e inclusión en acciones asociativas, como pueda ser una Asociación de Alumnado con Altas Capacidades, así como colaborar con asociaciones externas sobre este ámbito.

Talleres Enriquecimiento Cognitivo, Creativo y Socioemocional

3.5. Illes Balears

Programa de Atenci3n a las Altas Capacidades Intelectuales.
Universidad de las Islas Baleares

ABSAC
Por las altas capacidades y su talento
Mallorca

Becas Campamentos
Verano Absac Mallorca

ABSAC

Formaci3n para docentes

La escuela es uno de los agentes que, junto a la familia, tienen una gran importancia en la formaci3n y correcto desarrollo de los alumnos con altas capacidades. El centro educativo deberia ser un lugar muy gratificante para estos alumnos, ya que es una fuente muy rica y variada de conocimiento. Es un lugar id3neo en donde los estudiantes pueden saciar sus ansias de aprender, conocer, explorar, y donde deberian poder desarrollar su creatividad.

ASSOCIACI3M ENORQUINADALTESCAPACITATS

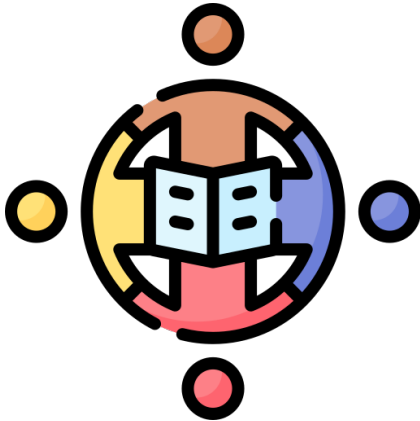

Linguistic and cultural adaptation of the LemaS Survey

4

4.1. Linguistic adaptation: semantic and cultural equivalence

Translation into Spanish
and back-translation

Semantic equivalence

Translation and rewording

Adjust words that sound ambiguous or unnatural in Spanish,
while maintaining the original meaning of the concept

Cultural equivalence

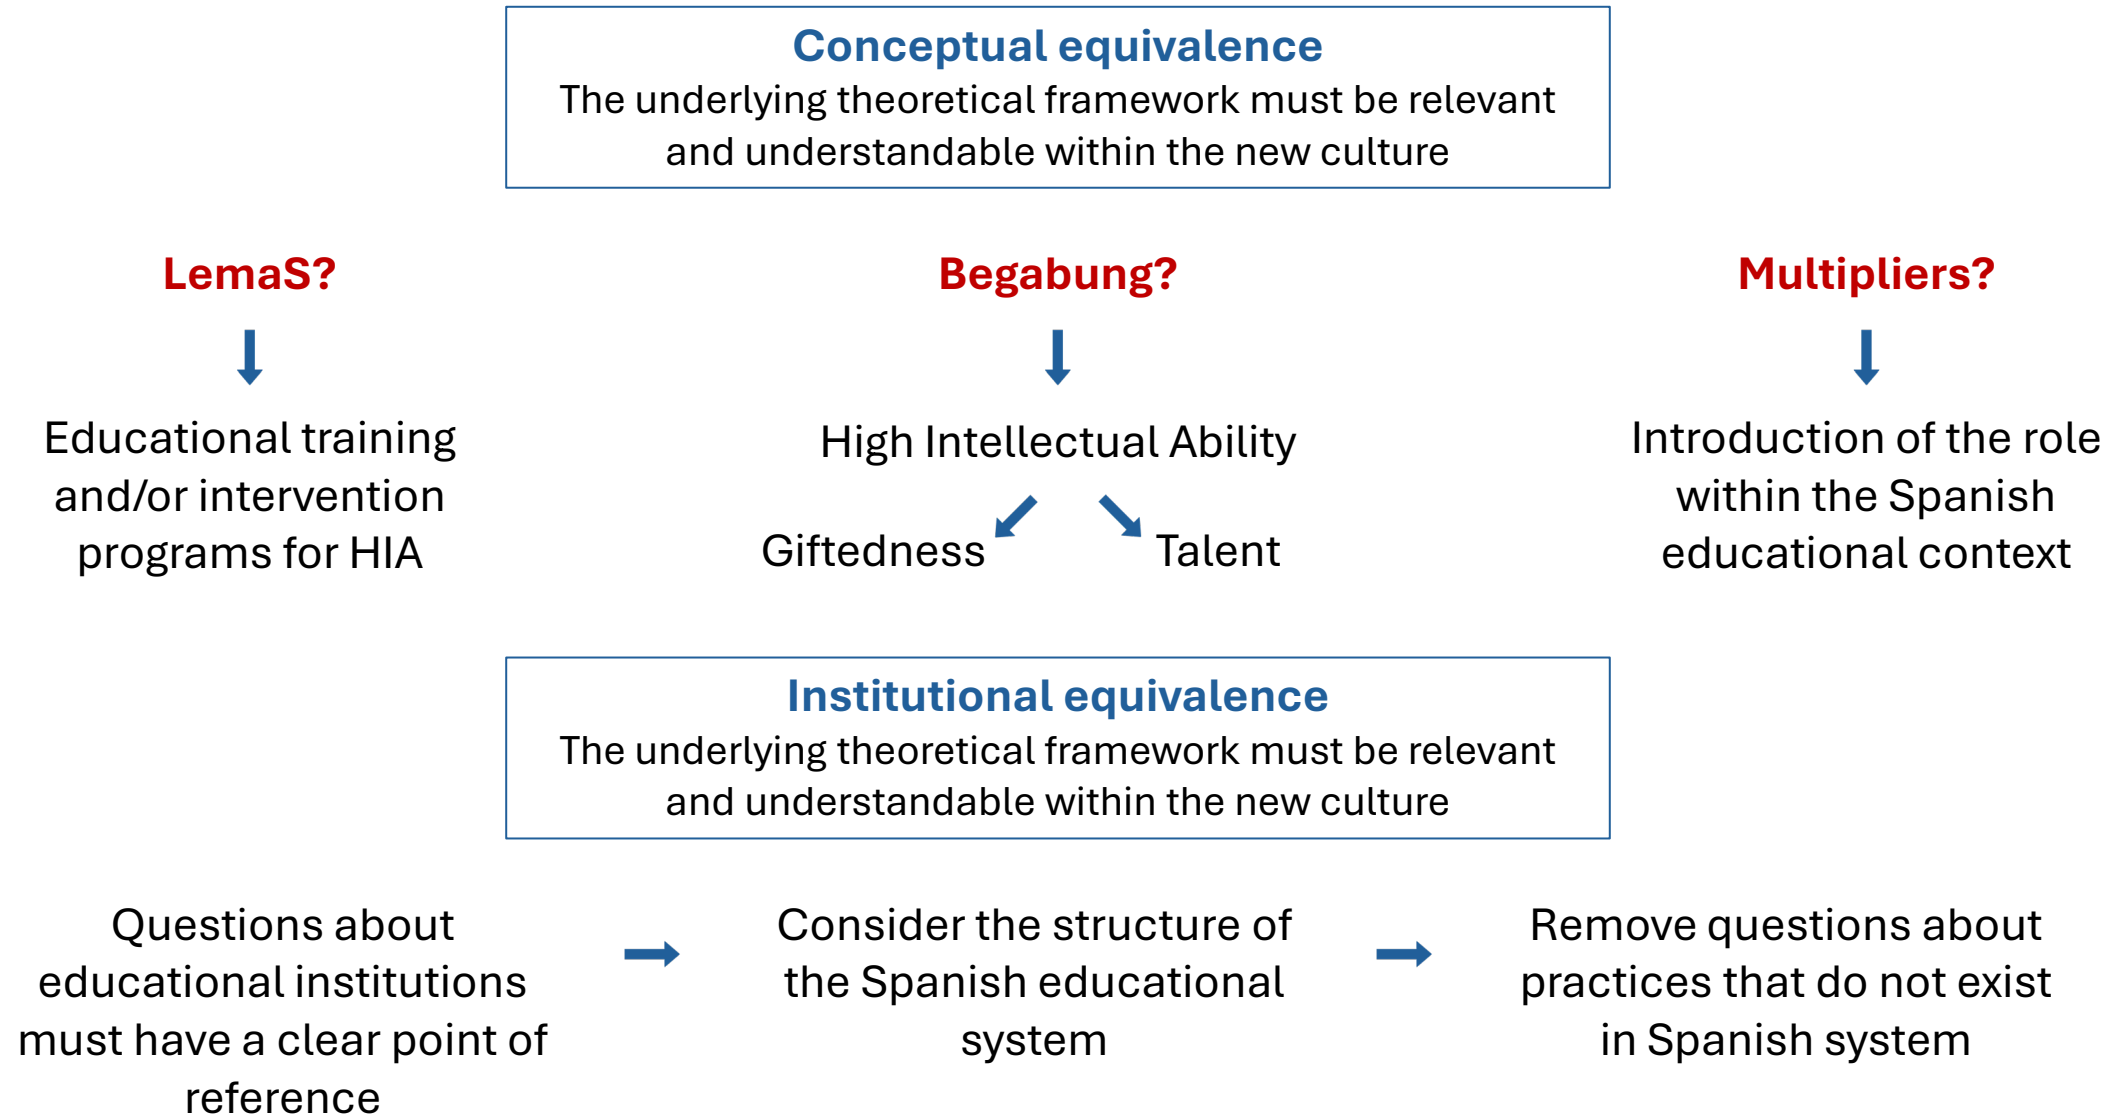

Idioms, references to the German educational system and
response formats were **adapted**

Cross-cultural
adaptation

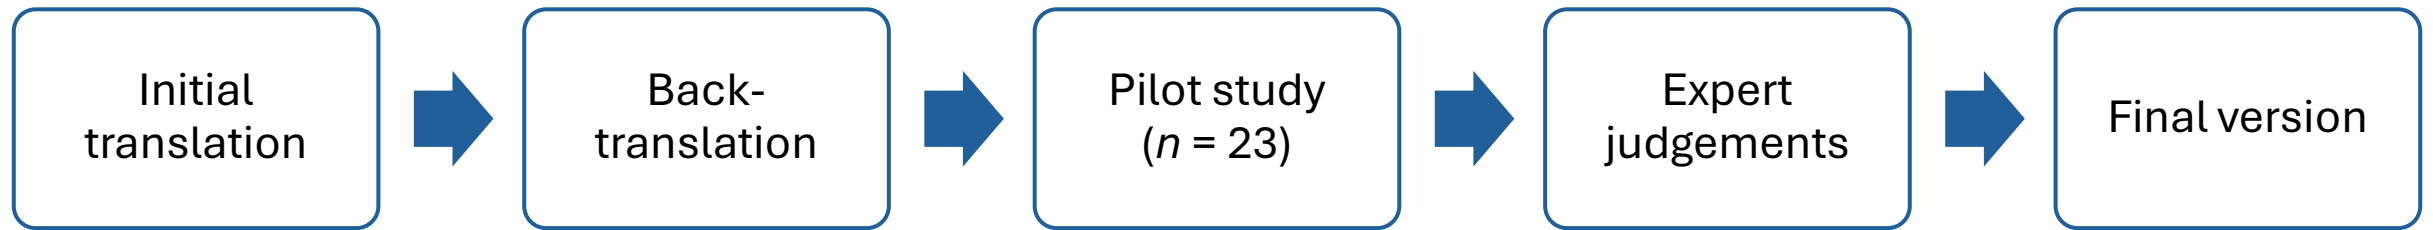

The result is a **questionnaire** that is **linguistically accessible** and **culturally relevant**

4.2. Cultural adaptation: conceptual and institutional equivalence

4.3. Process outcomes and evidence of validity

Evidence of validity

☐ Pilot study

To assess the questionnaire's comprehensibility, clarity, and internal consistency.

Questionnaire evaluation: suitability for the objective, comprehensibility and repetition of questions, addition or removal of items

☐ Content validity

Three judges assessed the adaptation of the questionnaire items according to four criteria: adequacy, consistency, relevance, and clarity.

☐ Internal structure validity

Confirmatory factor analyses

Future research lines

5

Descriptive analysis, reliability testing, normality assessment, correlational analysis, and hypothesis testing

Cross-cultural comparative analysis (Spain – Germany)

Mixed-methods integration (quantitative + qualitative)

Network analysis (centrality indices, expected influence, and network stability)

Factorial analysis and hypothesis testing

Cluster analysis (profile identification)

Text mining or sentiment analysis
